

Widgets

System operators can configure the widgets that appear on the system's home page.

1. Click the gear icon, and then click **System > My Schoolnet Settings**.
2. Click the  **edit** icon to change the properties:
 - Name - some widget names can be customized, but others can not be edited. You will not be able to edit the name field for widget names that cannot be edited.
 - Description - this text only displays to system operators when editing systems settings.
 - Control Source - the location where the widget is located on the server.

Caution: The location of the control source is essential to the proper working of your system. Do not modify this field until you have consulted the corresponding entry in the Installation Guide.

- View Permissions - enable the user roles who can view the widget.
3. Click **Save**.
