General System Operation > LMS Integration

LMS Integration

System operators using the system's state, multi-tenant, or single-tenant solution can add a LMS configuration per site that will determine the LMS's configuration URL, launch URL, Client ID, and Client Secret. This page is only available to Schoolnet users who also use a supported LMS. At this time, Schoolnet supports Canvas, itslearning, and Brightspace.

Each tenant must have its own URLs, Client ID, and Client Secret. For full instructions on how to configure your LMS, download the instructions from the link on the System: General Settings > LMS Integration page.

To enter configuration information and link to your LMS

1. Click the gear icon, and then click **System** > **General Settings**.
2. Click **LMS Integration**.
3. Enter the Client ID and Client Secret for each district. The URL is not configurable.
4. Click **Save**.
5. **For Canvas**: Enter the URL, the Client ID, and the Client Secret at the appropriate place in Canvas. Please download the Canvas instructions available at the link on the System: General Settings > LMS Integration page for full instructions on how and where to enter information in Canvas.
6. **For itslearning**: Enter the Client ID, the Client Secret, the Configuration URL, and the Launch URL at the appropriate place in itslearning. Please download the itslearning instructions available at the link on the System: General Settings > LMS Integration page for full instructions on how and where to enter information in itslearning.
7. **For Brightspace**: Enter the Client ID, Client Secret, Configuration URL, and Launch URL. Please download the Brightspace instructions available at the link on the System: General Settings > LMS Integration page for full instructions on how and where to enter information in Brightspace.
